

Press Release March 2014

Faster product innovation through new insights

In February 2014 a new startup was launched in Aargau, Switzerland, for the chemical industry. Its name is Inolytix - a combination of innovation and analytics.

The vision of the founder, Dr. Ralf Duempelmann, a former manager of R&D departments at one of the large specialised chemical companies is: to connect R&D departments with innovative analytical service providers. So they will gain more insights through the new methods to improve their products faster. "From my own experience I know how difficult it is and how much time is needed to find the right partner for a specific issue. With Inolytix we want to offer a portfolio of analytical services on one platform. The processes of finding the right analysis, to receive an individual offer and a qualified report of the results will be fast and easy. This will save time for R&D departments and accelerate their product development," explains CEO Ralf Duempelmann.

At the moment the analytical methods are focussing on surface analysis. In the future this will be extended to other types of analysis.

The startup is based in Kanton Aargau, Switzerland and is reaching out to customers and partners all over Europe through the website: www.inolytix.com.
